

# SHERPAK SMART BARS INSTRUCTIONS

## Handy Tip!

Wash the top of your car or the foam feet will trap dirt and your paint could get scratched.

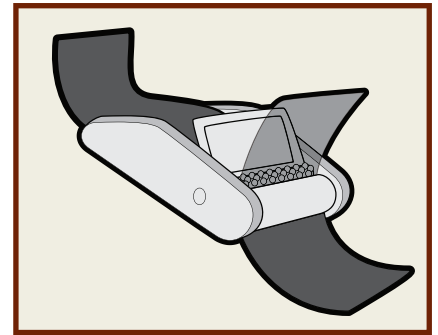

## Handy Tip!

If a strap makes a lot of noise during travel, unbuckle it, twist it once or twice, then re-buckle.

## Assemble the Feet

The plastic cap on the foam feet is made from a soft material that allows you to push it onto the Smart Bar. Start by snapping on one edge at an angle, then rotating the foot and lock it into place.

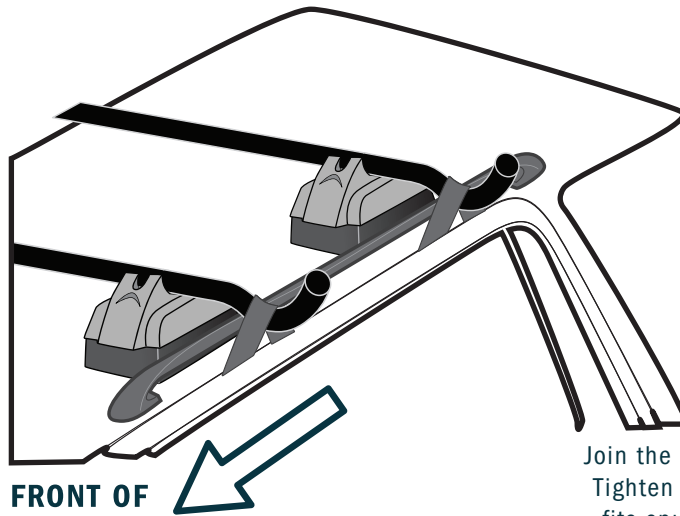

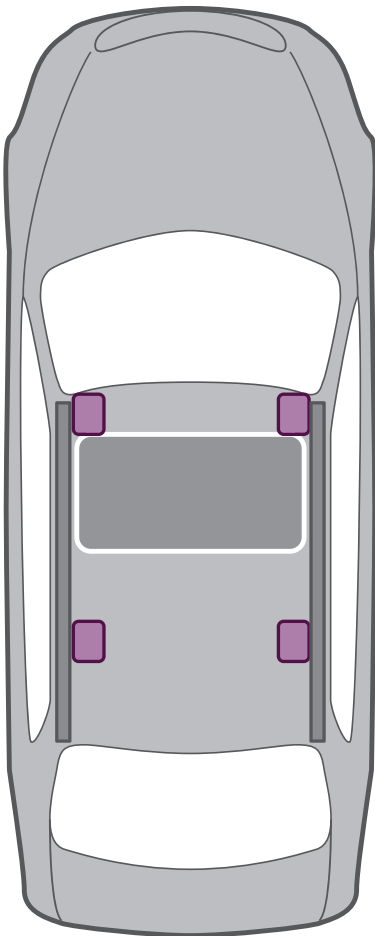

## CAM BUCKLE

### Mounting

Loop your strap over the elbow of the Smart Bar. Dangle enough strap on the cam buckle end to reach halfway through your car.

Thread the other end through your car, over the opposite elbow, then back through the car to the cam buckle end.

Join the cam buckle and strap end. Tighten the strap until the Smart Bar fits snugly. Test how secure they are by giving them a shove back and forth; they should be tight and not move.

**FRONT OF VEHICLE**

### Positioning

Smart Bars go on the roof of your car. Your vehicle's roof is strongest at the edges. Position your Smart Bar feet as wide as possible, close to the roofline; but make sure they are inside any existing rack bars.

Do not put your Smart Bar feet on top of sun/moon roofs.

### Be careful!

Don't cinch your Smart Bars so tight that you damage your roof.

### WARNING

Check load limit for your vehicle. Always secure the Sherpak Smart Bars before driving. If you hear excessive flapping or any thumping noise immediately pull over and check to make sure the Smart Bars is firmly secure. Contents may shift during travel.

### SEATTLE SPORTS COMPANY
